*J.D. Recipients and Candidates, Texas A&M University School of Law, 2018 and 2019; participants in Texas A&M University School of Law’s Global Law Program in Ghana. The Authors would like to thank Professor Aric Short and Professor Thomas Mitchell for being the faculty advisors in Ghana and throughout the process of writing this Article. Without your help and guidance this would have been an impossible task. Thank you to Professor Rita Yembolah and Dr. Cassandra Johnson Gaither for their assistance and support, and to the many Ghanaian attorneys, judges, agency officials, and chiefs who took time out of their busy schedules to meet with the Authors during their time in Ghana. Thank you to Elizabeth Shannon, Rebecca Ward, and the entire Texas A&M Law Review staff for editing this Article. Lastly, thank you to Dean Charlotte Ku, Professor Cynthia Alkon, Chase Sanger, and the entire Law School faculty and staff for their continued support and tireless efforts to make these programs successful.
I. INTRODUCTION

This Article dives into Ghana’s complex land-registration system, which is influenced by both statutory and customary law. Section II discusses Ghana’s statutory land laws. Section III provides a brief overview of Ghana’s customary land laws. Section IV discusses several obstacles within Ghana’s land-administration system.

II. STATUTORY LAW

A. Background

Since Ghana gained its independence in 1957, it has experienced significant political turmoil. There have been multiple military coups, a variety of constitutional movements, and leaders pushing ideologies—all of which have shaped Ghana’s culture and laws. These movements eventually led to the 1992 ratification of Ghana’s current Constitution, which establishes Ghana’s policies and laws regarding land ownership.

Ghana’s 1992 Constitution also established its current court system, which is an adversarial common law system. Ghana has two categories of courts: (1) the superior courts, which include the Supreme Court, the Court of Appeal, the High Court, and the Regional Tribunal; and (2) the lower courts, which include the circuit courts and the district courts (or Magistrate Courts). Descriptions of Ghana’s courts are as follows:

- The Supreme Court is Ghana’s highest appellate court and consists of at least nine justices, including one Chief Justice. The Supreme Court sits in panels of five judges. It has

7 Marful-Sau, supra note 4, at 5.
original and appellate jurisdiction over constitutional issues\(^8\) and exclusive jurisdiction over issues of high treason and Parliament exceeding its power.\(^9\)

- The Court of Appeal has no original jurisdiction—it exclusively decides appeals from the High Court, Regional Tribunal, and civil appeals from the Circuit Court.\(^10\) The Court of Appeal has one Chief Justice and no less than ten other justices, who sit in panels of three.\(^11\)
- The High Courts are regional courts and have original jurisdiction over all civil and criminal matters. They also have appellate jurisdiction for civil appeals from the District Courts and criminal appeals from the Circuit Courts, along with “exclusive jurisdiction for the enforcement of the Fundamental Human Rights enshrined in the 1992 Constitution.”\(^12\)
  Each High Court has one judge.\(^13\) The High Courts also have specialized divisions.\(^14\)
- The Regional Tribunals have only “special criminal jurisdiction to try offences against the state and public interest as Parliament may by law prescribe.”\(^15\)
- The Circuit Courts have jurisdiction over many types of claims, including: (1) contract or tort cases; (2) civil actions where the recovery of liquidated claims does not exceed 10,000 Ghanaian cedis; (3) landlord/tenant cases; (4) other types of other land cases; (5) probate and letters of Administration where the property’s value does not exceed 10,000 cedis; (6) child custody matters; and (7) criminal matters not involving treason or offenses punishable by death.\(^16\)
- The District Courts are the lowest courts in Ghana’s modern judicial hierarchy and every district in Ghana has at least one.\(^17\) District Courts have civil jurisdiction in personal tort or contract actions where the damages do not exceed 5,000 cedis and criminal jurisdiction over offenses where the fine does not exceed 500 cedis and the imprisonment term does not exceed two years.\(^18\) Three specialized District Courts have been established: Juvenile Court, Family Court, and Motor Court.\(^19\)
- The Judicial Committees of the Traditional Authorities hear chieftaincy disputes, which can be appealed to the Regional House of Chiefs and then to the National House of Chiefs.\(^20\)

Ghanaian chiefs no longer have legally recognized courts, but some customary groups have a form of mediation and alternative dispute resolution (“ADR”) programs. But if those programs fail, the only option is to sue in court. Land disputes adjudicated in court are decided under statutory rules regardless of whether the dispute arose from customary property rules or statutory law. This is likely because customary rules are usually not written down, but have been orally passed down between generations. Some people prefer to have their dispute settled by the courts rather than their chief—but if they want the dispute decided under customary law, they must utilize resolution methods outside of the courthouse.

A study conducted from October 2001 to March 2005 found that over half of the land-dispute cases filed in Ghana involved intra-family disputes. This includes “inheritance disputes between different sides of a family, amongst children of the deceased or between the widow and the children, unauthorised disposition of family land by an individual family member, and property disputes between divorcees.” The study also found that double sales or sales by someone without title to the land accounted for only about 13% of the land-dispute cases filed in Ghana.

B. Presidential Retention of Public Land and Minerals

Ghana’s Constitution has specific clauses describing how public lands and minerals should be handled. All public lands and minerals are “vested in the President on behalf of, and in trust for, the people of Ghana.” Public lands include any land vested in the government when the 1992 Constitution was ratified and any land acquired by the government through compulsory acquisition thereafter. Minerals are found in their “natural state in, under, or upon any land in Ghana, rivers, streams, water courses throughout Ghana, the exclusive economic zone and any area covered by the territorial sea or continental shelf.”

The reservation of public lands and minerals for government use in the interest of Ghana’s people has caused some tension. Landowners and leaseholders have little incentive to take proper care of their natural resources because they know the government will reap all benefits from the natural resources. The government compensates the landowner or leaseholder in exchange for the

resources and land it acquires. But this compensation is difficult for the landowner or leaseholder to obtain from the government and is rarely adequate considering what the government took from the landowner. This tension is discussed further in Section III of this Article.

C. Establishment of the Lands Commission

Sections 258–265 of the Constitution established the Lands Commission and enumerates its functions: (1) managing of public lands; (2) advising the President and authorities regarding land development and policy; (3) administering the land title registration process; and (4) following the instructions of the Minister responsible for land and natural resources. The Constitution also established the Lands Commission’s organizational structure and leadership positions. The Lands Commission’s leaders must follow appointment regulations and qualifications to avoid disqualification or removal from office. The Lands Commission is not just a centralized agency because it also has regional offices established by the Constitution that perform the same functions enumerated in section 258 within the individual regions.

D. Establishment of the Ministry of Lands and Natural Resources

Section 11 of the Civil Service Law of 1993 established the Ministry of Lands and Natural Resources (“MLNR”), whose main function is to ensure “the sustainable management and utilization of the nation’s lands, forests and wildlife resources as well as the efficient management of the mineral resources for socio-economic growth and development.” The agencies within the MLNR are the Forestry Commission, Lands Commission, Minerals Commission, Geological Survey Department, Precious Minerals Marketing Company, and the Office of the Administrator of Stool Lands. A cabinet minister appointed by the President leads the MLNR. The MLNR is responsible for implementing long-term reforms in the Land Sector, including preparing land for agriculture, forestry, and mining.

E. Non-Citizen Land Ownership

The framers of the Ghanaian Constitution thought it was important that only Ghanaians own land in Ghana. The Constitution prohibits non-Ghanaians from having a freehold interest in Ghanaian land. This law applies retroactively to August 22, 1969. The maximum land interest that a non-Ghanaian can have is a fifty-year leasehold. Any conveyance of land to a non-Ghanaian that violates this prohibition is immediately void. Therefore, a non-Ghanaian who wishes to possess land for longer than fifty years must renew the lease every fifty years. This can cause problems if the landowner decides to stop leasing the property or if there is a conflict as to who actually owns the land. This adds to the already complicated process of determining land rights and ownership.

F. Stool and Skin Land

Ghana recognizes two forms of land ownership: statutory and customary. The Constitution establishes statutory land ownership through formal land registration. In contrast, customary ownership derives from the stools and skins who own the land and can convey it to others. Stool and skin refer to the Ghanaian chief or the area the chief oversees. Generally, stool is used in Southern Ghana, where a carved wooden stool is the “traditional symbol of chieftainship and is believed to contain the souls of the ancestors.” Skin in generally used in Northern Ghana, where the chief’s animal skins represent his authority.

The government recognizes the stools’ and skins’ customary ownership, which takes precedence over governmental control so long as the statutory laws are not violated. Section 267 of the Constitution acknowledges stool and skin land, develops the leadership structure, and describes the functions of the Regional Lands Commission, which works with the stools and the skins. Part of this customary system requires stools and skins to pay 10% of revenues from their lands to the government and its agencies.

53 CONSTITUTION Apr. 28, 1992 § 267 (Ghana).
54 Id. § 267(1)–(5).
55 Id. § 267(6).
G. Natural Resource Protection

Ghanaian landowners cannot convey their land to anyone for the purpose of natural resource extraction without parliamentary ratification.\(^56\) Parliament can also create a resolution to approve certain transactions if two-thirds of Parliament vote in favor of that resolution.\(^57\) Parliament must then create commissions to regulate minerals, forestry, fisheries, and any other necessary commissions to protect natural resources.\(^58\) These commissions allow the government to protect its natural resources and regulate their cultivation, processing, and distribution.

H. Current Legislation: The Land Bill of 2016

“[A]fter decades of piecemeal legislative and state management measures” in Ghana, the government started its first comprehensive National Land Policy in 1999.\(^59\) The First Land Administration Project (“LAP-1”) emanated from that Policy in 2003.\(^60\) The LAP-1’s objective was “to develop a sustainable and well-functioning land administration system that is fair, efficient, cost effective, [and] decentralized and that enhances land tenure security.”\(^61\) The LAP-1, a twenty-five-year project divided into five-year phases,\(^62\) “was designed to address . . . the high level of land disputes in the country and cumbersome land administration procedures involving various statutory agencies as well as customary institutions.”\(^63\) In 2010, the Ghanaian government launched the Second Land Administration Project (“LAP-2”), which built on the LAP-1.\(^64\) The LAP-2’s objective is to “consolidate and strengthen urban and rural land administration and management systems for efficient and transparent land service delivery.”\(^65\)

The Land Bill of 2016 (“the Land Bill”), which stems from the LAP-2, aims to make the land-administration process simpler by consolidating Ghana’s land laws.\(^66\) The Land Bill’s main focus is collaboration among key authorities who have a stake in land issues—especially

\(^{65}\) Id.; COLANDEF & Forestry Commission Interview, supra note 25.

\(^{66}\) Ghana: Second Land Administration Project, supra note 64; Fourth Draft, The Lands Bill of 2016 S. 242(1), Ghana (2016) [hereinafter Lands Bill] (“The objective of the [Land] Bill is to revise and consolidate the laws on land, with the view to harmonize[.] those laws to ensure sustainable land administration and management, effective land tenure and efficient surveying and mapping regimes and to provide for related matters.”).
customary chiefs.\textsuperscript{67} The Lands Commission is the lead agency responsible for implementing the Land Bill.\textsuperscript{68}

1. Structure

The Land Bill begins by defining the various interests in land: allodial title, customary law freehold, common law freehold, usufructuary interest, leasehold interest, and customary tenancies.\textsuperscript{69} The Land Bill then proposes procedures for surveying and conveyance, title registration, land registration, conflict management, customary land, and compulsory acquisition.\textsuperscript{70} The Land Bill concludes by repealing seven previous land acts.\textsuperscript{71} However, any prior land acts not listed are valid “until reviewed, cancelled or terminated.”\textsuperscript{72} Further, “[a]ny instrument or document made or issued under the repealed enactments shall continue to be valid under [the Land Bill] . . . until otherwise revoked.”\textsuperscript{73}

2. Notable Sections

The Land Bill has many notable sections, one being the section for gender equality in land acquisition. In the past, most women did not have enough money to lease land, so they had to rely on customary tenancies, which are similar to sharecropping.\textsuperscript{74} The Land Bill, however, allows women to register a customary tenancy without converting it to a lease.\textsuperscript{75} Further, land acquired by one spouse during the marriage becomes property of the spouses collectively, providing women with an additional avenue to acquire land rights.\textsuperscript{76} Additionally, if only “one spouse is stated in the [land] certificate as the proprietor of land or an interest in land . . . , that spouse shall be deemed to be holding the land or interest in land on behalf of that spouse and in trust for the other spouse.”\textsuperscript{77}

However, these provisions equalizing the rights of men and women have received substantial pushback.\textsuperscript{78} If the Land Bill passes, it would effectively recognize a woman’s work in her home as a contribution toward the purchase of the home.\textsuperscript{79} This would allow women to utilize

\textsuperscript{79} COLANDEF Interview, supra note 74.
their traditional roles in the home to acquire land rights. It will also indicate a movement away from the antiquated paradigm created by the patrilineal customary system, which is discussed further in Section III.

Another notable section of the Land Bill addresses customary law and attempts to harmonize the land-registration process between customary and statutory practices. This section requires a stool, skin, clan, or family that owns land to select a Customary Land Secretariat to manage the land; describes how the Secretariat should conduct business; and describes how the landowner will pay the Secretariat. The Land Bill specifies that stool, skin, clan, and family lands must be formally registered with the Lands Commission. The Land Bill also expands on customary land rights by declaring that “[a]fter the commencement of this [Bill] . . . it shall be unlawful to vest clan or family land in the Republic.”

Further, the Land Bill designs a system for electronic land conveyances, which Ghana currently lacks. The Land Bill states that the Lands Commission shall: (1) establish a land-information system equipped with the requisite technological infrastructure; (2) train and equip staff to manage the system; and (3) educate professionals who provide services to the public on the land information system. Only a qualified legal practitioner, who has been granted access to the information system by the Lands Commission, can make an electronic conveyance. The Land Bill also addresses compulsory acquisition of private land for public use, which has caused conflict and distrust between citizens and the government. The current issues with compulsory acquisition are discussed in further detail below in Section IV, but the Land Bill also includes provisions to help address these issues. For example, before a compulsory acquisition is finalized, the person acquiring the land must prove in writing that the acquisition funds have been paid into an escrow account managed by the Lands Commission. The Land Bill also subjects Lands Commission officers to consequences for not following best practices during the compulsory-acquisition process.

Further, the Land Bill establishes penalties for other government officials. Any public officer that falsifies land records, fraudulently issues or alters documents, fraudulently removes documents from the land register, or mutilates any land register or Lands Commission document is subject to a fine or term of imprisonment. These penalties represent the government’s acknowledgment of Ghanaian citizens’ corruption concerns and ensures that the land-registration process is credible and trustworthy.

III. CUSTOMARY LAW

80 Id. § 16.
81 Id. § 173(1). The registration must be updated when the stool, skin, or head of the clan or family changes. Id. § 173(3).
82 Id. § 255.
83 Id. § 71–77.
84 Id. § 73. The electronic system must include the time and date of the conveyance and certified electronic signatures of each authenticating person. Id. § 76.
85 Id. § 225. Further, landowner who is dissatisfied with the Lands Commission’s compensation assessment may apply to the Lands Commission for review for a review. Then, if that landowner is still dissatisfied with the assessment, he or she may proceed with the ADR system. Id. § 240. Lastly, a landowner who is still dissatisfied after ADR can resort to the High Court. Id.
86 Id. § 263.
In Ghana, customary law affects various aspects of Ghanaians’ lives. Customary law existed long before the 1992 Constitution and any statutes adopted by Parliament. Customary law is a set of norms adopted by Ghanaian tribes and is held in societal memory. The judiciary has made efforts to standardize customary law through case law, yet codification of customary law into statutory law remains incomplete.

Most notably, customary law impacts Ghana’s land-tenure system and land-use laws because all Ghanaian land is owned by someone. Therefore, anyone attempting to sell, develop, or inherit land in Ghana must first identify the rightful owner. Due to the longstanding practice of not registering lands, identification can be difficult. Accordingly, the judicial process is often complicated and cumbersome. Thus, some take matters into their own hands by choosing tribal justice, while others do nothing at all.

Ghana’s tribal system makes its customary laws unique. Customarily, lands in Ghana are either Stool Lands or Skin Lands. Whether the land is Stool or Skin Lands often depends on the method of inheritance: matrilineal or patrilineal. In the patrilineal system, inheritance is tied directly to the father’s lineage; and in the matrilineal system, inheritance is tied directly to the mother’s lineage. Because customary law is regional in nature, location can determine whether the tribe or village falls under a patrilineal or matrilineal system. Most Stools are patrilineal, while most Skins are matrilineal. The following Sections discuss the patrilineal and matrilineal systems to provide a concise description of how both impact land tenure.

A. Patrilineal Customary Law

In Ghana, men are afforded far more property rights than women. Although present in both customary and statutory law, this disparity is more apparent within customary law. Generally, natives establish custom by presenting evidence of local custom or authoritative textbooks.

---

88 Id. at 197 (“Customary law has been continuously interpreted and adal application for more than 150 years, and a large body of case-law has been built.”).
89 Attorney Interview II, supra note 27.
90 See id. (“Land ownership in Ghana widely operates on the premise that ‘there are no “ownerless” lands in Ghana.’ Land rights are governed by customary and statutory law, statutory law trumps customary when there are conflicts in the law. Chiefs and Families are instrumental in the customary land interest.”).
91 *Ann. Hum. Rts. Rep.* Submitted to Cong. by U.S. Dep’t St., Vol. 35, xiii–1112, 270 (2011). Chieftaincy disputes, which frequently resulted from a lack of clear succession, competing claims over lands and other natural resources, and internal rivalries and feuds, continued to result in deaths, injuries, and destruction of property. For example, in January one person was killed and two others seriously injured over a land dispute between Abiriiw and Dawu residents, in Kuapem, North District. Daniel Fitzpatrick, *Fragmented Property Systems*, 38 U. PA. J. INT’L L. 137, 154 (2016). “A study of urban land in Ghana found that 40% register land transfers with the national land agency.” Id.
93 Id.
94 Id.
95 Kofi Akamani, supra note 92.
96 Woodman, supra note 87, at 131–32. There are other methods, however they are less prevalent. Id.
Because 80% of Ghanaian land is held under customary land tenure, the perpetuation of disproportional rights will likely persist unless appropriately addressed. This Section focuses on the disparity in property rights under customary law within the patrilineal system.

It is important to first emphasize that “patrilineal” and “patriarchal” are not synonymous. In a patrilineal system, inheritance descends through the father’s lineage, whereas a patriarchal system signifies that the head of the family is a male. However, given the historic disenfranchisement of women in Ghanaian culture, the family structure is often patriarchal by default. Although women in a patrilineal family may legally inherit land, families typically give priority to men. This paradigm is detrimental to a female’s attainment of property rights because a Ghanaian person’s position in the family lineage determines the person’s political, economic, and social position in the community.

The disparity in property rights is most apparent in women’s access to marital property rights. Although changes in marital property rights have been discussed briefly above regarding the Land Bill, it is important to understand their relation to patrilineal customary law. Currently, women mainly acquire land through marriage. But property acquired during marriage is not considered joint property of the two spouses. The land purchased belongs solely to the spouse who paid for the land. Although on its face this arrangement is not discriminatory, in practice it strips women of any practical means of attaining property rights because the man generally purchases the land. The disparity of rights is exacerbated by the fact that women generally cannot independently buy land because they account for a disproportionate number of Ghana’s poorest citizens. Further, women do not have equal wealth development opportunities as their male counterparts because of Ghanaian women’s traditional duties. Thus, current marital property rights hinder women’s rights and access to land; but, there is hope for reformation.

As discussed in the previous Section, the Land Bill seeks to address the marital-property-rights issue created by customary law. Under the Land Bill, any land acquired during the marriage becomes property of the spouses collectively. However, as discussed above, there is substantial pushback against the provisions that would equalize men’s and women’s rights. If the Land Bill is enacted, it will signify a shift away from the antiquated paradigm created by the patrilineal customary system.

B. Matrilineal Customary Law

As noted above, Ghanaian laws generally afford men more rights. At first glance, the matrilineal system seems to be an exception to this practice. However, male heirs are still the favored inheritors in a matrilineal system.\textsuperscript{110} In 1985, the Intestate Succession Law ("ISL") furthered this discrimination by transforming inheritance rules in customary matrilineal systems.\textsuperscript{111}

In a traditional matrilineal system, the entire lineage may be traced to a single female ancestor.\textsuperscript{112} In Ghana, the Akan are a prime example of a matrilineal society. Akan fathers cannot pass land to their sons. Instead, fathers can only pass land to their sisters’ sons or to certain other males of their maternal kin.\textsuperscript{113} But Akan mothers can freely pass their property rights to their daughters because children are considered part of the mother’s kin group in a matrilineal system.\textsuperscript{114}

The ISL granted particular protections to the nuclear family, rather than the extended family. In Ghana, the concept of a nuclear family\textsuperscript{115} does not exist as it does in the United States.\textsuperscript{116} Spouses are not related in the Western sense.\textsuperscript{117} Under the ISL, once a man’s household possessions are transferred to his spouse and children, “the residue of a man’s intestate property has to be distributed as follows: nine-sixteenth to children, three-sixteenth to surviving spouse, one-eighth to surviving parents and the remaining one-eighth, in the case of the matrilineal Akan, to the matrikin.”\textsuperscript{118}

Before the ISL was passed, such intestate property passed to the kin group under customary rules.\textsuperscript{119} Regardless of whether a group follows matrilineal or patrilineal lineage, the ISL allows fathers to pass land on to their children, even though it is against the custom of the matrilineal system, as statutes precede customs.\textsuperscript{120} The result is that the bulk of male-owned land transferred in inheritance is passed on to male heirs, continuing to favor an already male-favoring system.\textsuperscript{121} Because statutes control over custom, the customary system of matrilineal inheritance is being pushed out. Disparity in male and female treatment is not merely a customary practice—it has

been codified.

While the matrilineal system continues, there are statutory methods to bypass the matrilineal system. Regardless, several prevalent matrilineal groups still exist in Ghana. The Land Bill could impact land inheritance and solidify women’s place in the land system.

IV. Practicalities and Issues

A. Ownership, Acquisition, and Registration of Land in Ghana

1. Ownership

In Ghana, land ownership is a multifaceted concept, partly due to the dual-tenure and land-management systems. For example, customary lands are governed by customary law, but statutory lands are governed by statute. The customary system is more common, but the government’s increasing use of the statutory system has weakened both the reliance and use of customary law.

If customary law conflicts with statutory law, the statutory law trumps, thereby affecting who ultimately owns the land.

It is often difficult to determine the true owner of a specific piece of land. And because Ghana’s primary resource is land, ownership disputes often arise. Further complicating those disputes is the fact that no Ghanaian lands are ownerless. Thus, possession of the land becomes important because the adverse possession statute of limitations is only twelve years.

Ownership issues are further muddied by the myriad of land interests that a landowner can have, coupled with the increasing use of leases.

Access to public information on land ownership is a big problem. Many Ghanaians do not know who to speak with to acquire land because they do not know who owns the land. And foreigners interested in leasing land need a local Ghanaian’s assistance.

2. Acquisition

Both Ghana’s customary and statutory system have various faults. Under Ghana’s customary system, land acquisition is an already complicated process that becomes even more complicated when an acquisition triggers statutory laws. Within the customary system, one problem arises when multiple people attempt to acquire the same land. This problem is particularly

122 Attorney Interview II, supra note 27.

129 Id.; COLANDEF & Forestry Commission Interview, supra note 25; Attorney Interview II, supra note 27 (stating that the problem with land in Ghana is that there are too many conflicting interest).
130 COLANDEF Interview, supra note 74.
common among large families or land-owning clans.\textsuperscript{131} For example, one family member may grant an interest in a piece of land to an individual. Unaware of the previous transaction, a second family member may grant an interest in the same piece of land to a different person. Assuming both parties have the required allodial or customary freehold interest, they both have the right to transfer the land. The family’s failure to communicate or maintain adequate records causes future problems for people acquiring an interest in that land. In fact, a Ghanaian attorney stated: “If you acquire land from two different people claiming an interest, you are only being prudent.”\textsuperscript{132}

A similar problem arises when parties falsely claim to have the required land interest to grant property rights to others. For instance, a chief may falsely claim to have the interest necessary to transfer title even though he possesses a lesser interest.\textsuperscript{133} Thus, the buyer would not actually have title to the land and would likely lose in a legal dispute to determine the land’s rightful owner.

Acquiring land statutorily, which requires some formalities and adherence to statutes, also comes with its own issues.\textsuperscript{134} Typically, the new owner must register the land with the Lands Commission and obtain a land-title certification.\textsuperscript{135} However, if there is an ownership dispute, land registration can be delayed by months—or even years—while the dispute is litigated. One Ghanaian attorney stated that these disputes normally took substantially longer than six months.\textsuperscript{136} These disputes are common due to the problems with familial land transfers.\textsuperscript{137}

3. Registration

Although land registration prevents land-ownership disputes, only a small percentage of registerable land is actually registered.\textsuperscript{138} In 1998, only 32% of public-land instruments were registered and 68% of Stool-Land instruments were registered.\textsuperscript{139} Although this percentage of registered Stool-Land instruments seems relatively high, the Stools are not given registered copies when their property is leased. This makes it almost impossible for a Stool to secure the reversionary interest when the lease ends.\textsuperscript{140} Consequently, the Stool could lose this land when the lease ends because he has no documentation to prove his right to bring legal action.\textsuperscript{141}

Another issue with registration is the lengthy and cumbersome process.\textsuperscript{142} Although a person with a land interest should register it as soon as possible, registration can often take

\bibitem{141} Id.
\bibitem{142} Attorney Interview II, supra note 27.
\end{thebibliography}
anywhere from six months to several years due to competing claims.\textsuperscript{143} Rather than spending time arguing over competing claims in court, many people decide not to register their land.\textsuperscript{144} This is especially true for farmland due to the misconception that land only needs to be registered if it is used for residential purposes.\textsuperscript{145}

Landowners may also face other impediments in the registration process. First, customary freeholds cannot be registered.\textsuperscript{146} Second, if the land being registered is family or Stool Land, the buyer must speak with the family members. In doing so, the buyer may find that another family member has already sold the same land rights to someone else.\textsuperscript{147} Alternatively, if the land is government-owned, the buyer must go through the Lands Commission.\textsuperscript{148} In either case, the person registering the land must pay stumpage fees if trees are on the property and obtain a yellow card as evidence of the registration application.\textsuperscript{149} Some landowners mistakenly assume that the yellow card is evidence of registration—not just receipt of the application.\textsuperscript{150}

B. Compulsory Acquisition and Illegal Resource Harvesting

1. Compulsory Acquisition and Compensation

Ghana’s 1992 Constitution and the Minerals and Mining Act of 2006 both dictate that “[e]very mineral in its natural state . . . is the property of the Republic of Ghana and shall be vested in the President on behalf of, and in trust for the people of Ghana.”\textsuperscript{151} For the President to exercise his rights, the government must compulsorily acquire the land from its owner.\textsuperscript{152} Compulsory acquisition is the process by which the government can claim land for the purpose of collecting minerals and natural resources. The government acquires lands to collect minerals like gold, bauxite, manganese, and diamonds.\textsuperscript{153}

The Minerals and Mining Act of 2006 establishes the process and procedures for compulsory acquisition of minerals. When land is first designated for acquisition, the Land Valuation Division of the Lands Commission surveys the land for its current crops and structures and determines a value by which the land owner can start their price negotiations.\textsuperscript{154} The mineral-
rights holder and the surface-rights holder must negotiate and agree on compensation. But if an agreement cannot be made, however, the Minister of the Lands Commission, consulting with other Lands Commission officials, must determine the compensation paid by the mineral-rights holder to the surface-rights holder.\(^{155}\)

Surface-rights holders are guaranteed “prompt payment of fair and adequate compensation.”\(^{156}\) However, the meaning of “fair and adequate” is not clear and is commonly determined by section 74 of the Minerals and Mining Act. Under the Act, the lawful owner or occupier of the property is entitled to compensation for the loss of use of the land’s surface, loss or damage to immovable property, loss of earnings from cultivated land, and loss of expected income from the crops.\(^ {157}\) The cost of relocation, annual ground rent, and the landowner’s time and effort must also be considered when determining proper compensation.\(^ {158}\) Lastly, in lieu of monetary compensation, the landowner or lawful occupier can relocate at the mineral-rights holder’s expense.\(^ {159}\)

Though the statutes may seem fair and adequate, on a practical level there are many issues with the compulsory-acquisition system. In reality, the landowner or lawful occupier rarely receives compensation. And when they do, it is likely insufficient compared to their entitlement under sections 73 and 74. The compensation amounts are generally low and meant only to appease the landowner, not compensate them for the total loss.\(^ {160}\) The main difficulty with actually receiving compensation is the cumbersome process of determining who the lawful owner or occupier is.\(^ {161}\) Multiple people often claim ownership of the land, and the land is likely unregistered with the Lands Commission.\(^ {162}\) In these instances, the mineral-rights holder still retains the land and can begin mining activities; but the compensation remains unpaid until a court determines the lawful landowner or occupier.\(^ {163}\) In turn, this delays receipt of compensation and also creates a high likelihood of never receiving compensation.

2. Illegal Logging

\(^{155}\) MMA, supra note 34 at 73(3); see also J.Z. Ayitey et al., Compensation For Land Use Deprivation In Mining Communities, The Law And Practice: Case Study Of Newmont Gold Ghana Limit Ed, SURVEYOR J. GHANA INSTITUTION SURVEYORS 32, 34 (2001) [hereinafter Compensation for Land Use Deprivation].

\(^{157}\) MMA, supra note 34, at § 74(1). The compensation for the crops on the land is statutorily different than many of our interviews led us to believe. Many people said that the landowner or occupier is only entitled to money for the crops on the land at the time the land is taken. However, section 703.74(1(d)) states that “loss of expected income, depending on the nature of crops on the land and their life expectancy . . ..” This shows that the owner of the surface rights is entitled to compensation for the loss of crop revenue during the life expectancy of the crops.

\(^{158}\) MMA, supra note 34, at § 74(3).

\(^{163}\) The money is not put in trust, or set aside for the lawful owner or occupier. The mining simply commences without any person being paid for the land until the lawful individual can be determined. Id.
Similar to minerals, naturally occurring timber resources are vested in the President and held in trust for the people of Ghana.164 The inadequacy and poor likelihood of compensation for lost surface rights often leads to unlawful and unethical practices such as illegal logging.165 A landowner or lawful occupier aware of the land’s resources may fear lack of compensation. Thus, the landowner or lawful occupier may then allow illegal logging on their property to protect the land from compulsory acquisition and to ensure compensation for the land’s resources and the loss of land use.166 An additional reason for illegal logging is the power struggle between the Forestry Commission and local chiefs over adequate compensation.167 Often, the farmers stuck in the middle of these disputes will illegally log the timber to ensure adequate payment.168

Approximately one-fifth of Ghana’s land mass is forest land; however, it is quickly being lost due to deforestation.169 A main cause of deforestation is the conversion of forests into land used for other purposes, such as agriculture and mining.170 The Forestry Commission monitors illegal logging on forest reserves and enforces penalties through the criminal justice system, which can result in both fines and jail time.171 However, the understaffed Commission cannot effectively police the vast forests.172 Accordingly, it is difficult to catch illegal loggers in the act and even more difficult to catch them after they harvest the timber.173

Many people argue that if landowners are given tree-ownership rights, they would have a greater incentive to care for the trees and to abstain from deforestation activities.174 In line with this argument, the Forestry Commission has introduced a tree-registration system to combat illegal logging problems and to help protect and rebuild the forests.175 This system allows landowners and lawful occupiers to register planted trees on their property. The program’s basic purpose is to reverse deforestation by incentivizing landowners to plant trees.176 By registering planted trees in

176 Forestry Commission Interview II, supra note 61.
their name, the landowners receive the right to harvest timber and retain the profits when the trees have matured.177 Although this system is rather new, it seems well-planned.178

Additionally, more socially geared projects have been instituted to help encourage good resource management and land stewardship. One project is the implementation of social-responsibility agreements, which encourage local landowners to leave trees in place for those who have timber permits, allowing them to legally harvest. These agreements require logging firms to give a portion of their profits to local forest-fringe communities.179 This allows the communities to benefit economically from legal and sustainable timber sales. These agreements ensure that those with timber-utilization contracts give back to other Ghanaians who have no ability to benefit from the natural resources around them.180 The agreements also ensure that the harvesters log in a socially responsible manner.181 Money from the agreements can fund schools, clinics, roads, and community development.182 If the firms do not follow the agreements, the courts can compel them to comply with the contract.183

Lastly, the Forestry Commission has implemented the REDD and REDD+ programs (“the REDD programs”).184 The REDD programs’ purpose is to reduce emissions from deforestation while encouraging conservation and sustainable forest-management strategies.185 To accomplish this, the REDD programs focus on the country as a whole and the education of individual communities.186 The REDD programs work through private systems, which allows them to be more productive and efficient than governmental entities.187

These systems and programs are designed to work together to combat deforestation and improve the environment. Many of the programs are relatively new or are still in the planning phase. The forestry industry accounts for 2% of Ghana’s GDP and employs 15% of Ghana’s workforce. Agriculture accounts for 36% of Ghana’s GDP and employs 45% of Ghana’s workforce.188 Combined, these two industries account for over half of Ghana’s workforce. Inadequate compensation and illegal logging in both the agriculture and forest industries could affect half of Ghana’s employment and cripple Ghana’s national economy. Currently, Ghana’s government is not considering any new formal legislation, amendments, or rules on these issues. But with such grave consequences on the line, the Ghanaian government must consider

177 Akapme, supra note 187.

178 However, it is yet to be seen if this is a long-term solution, or if problems will arise due to the long time period for trees to mature and be ready for harvesting. It is possible that there will be a situation where a lessee registers trees in his name, with the approval of the landowner, but by the time the trees are ready to be harvested, the relationship between landowner and leaseholder had soured and a conflict will arise as to the trees.

compulsory acquisition’s effects on individual landowners and reflect on the possible widespread environmental, economic, and social consequences of its current natural-resource acquisition procedures.

C. Problems with Land Court

With the extremely high number of land disputes filed in Ghana, the judicial system must be quick and efficient. In 2003, however, there were approximately 60,000 land disputes in Ghanaian courts, with 15,000 of those cases pending before the Accra courts alone. Many administrative problems stand in the way of quickly disposing of this large amount of land disputes. Litigants’ cases are often severely delayed and can sometimes take years to resolve. Regrettably, no party to the process takes responsibility for the delays and instead, they blame each other.

1. Overscheduling

One main administrative bar to quick disposal of a case is the overscheduling of hearings. According to a Ghanaian attorney, lawyers often go to court for their scheduled hearing, but either their case is never called or the judge does not appear. And this problem has not improved within the last twelve years: In 2005, about 40% of people said they attended court more than twenty-one times and about 60% said they attended about 100 times. One Ghanaian attorney stopped practicing litigation because she felt that she wasted too much time waiting in court. Unfortunately, it does not look like this practice will change anytime soon because there are no proposals or discussions of changing this practice.

2. Court Reporters

The lack of access to reliable court records is also a big problem in Ghana’s court system. According to a Ghanaian Appellate Judge, the appellate court judges must write everything by hand. In contrast, most United States judges have law clerks that do a significant amount of that work for them. Another Ghanaian judge stated that the judges are supposed to have recorders in their court rooms during proceedings, but once her first recorder failed, she never got another. One courtroom actually had a court reporter that was typing on a standard computer and the judge had to continually pause the proceedings to ensure that the court reporter could accurately record the proceeding.

189 Eric Yeboah & Franklin Obeng-Odoom, “We are not the Only Ones to Blame”: District Assemblies’ Perspectives on the State of Planning in Ghana, 7 COMMONWEALTH J. L. & GOVERNANCE 66, 78, 84 (2010).

195 Interview with undisclosed judges, in Accra, Ghana (May 18, 2017) [hereinafter Judges Interview].
196 Id.
3. Progress and Solutions in Court

Fortunately, ADR has become a more popular option in Ghana,\textsuperscript{197} decreasing the courts’ high number of land-dispute cases. For example, the Court Connected Alternative Dispute Resolution mediated 1,373 cases in 2016 with a 44% settlement rate.\textsuperscript{198} Between 2003 and 2010, 770 land disputes were settled through ADR.\textsuperscript{199} Hopefully within the coming decades, Ghana will significantly increase its use of ADR, which could remove a huge burden from land-dispute courts and reduce the high amount of cases filed.

The good news is that there is growing confidence in Ghanaian courts.\textsuperscript{200} According to a Ghanaian attorney, this changing attitude is likely due to modernization, the increasing prevalence of technology, and the mixing of traditional family lines within bigger cities.\textsuperscript{201} In the past, many Ghanaians acquired land without a formal document; but Ghanaian’s are beginning to realize that formal documents are necessary.\textsuperscript{202} Hopefully this will decrease the amount of land disputes and make disputes that do arise easier to resolve.

Although Ghanaian courts appear to be headed in the right direction, they still have a long way to go. First, those in charge of Ghana’s judiciary system should consider scheduling each case for a specific time period. Accordingly, attorneys and clients would spend less time waiting in court. Second, they should consider hiring law clerks for judges to help manage their immense caseloads. Third, they should ensure that each courtroom has a competent court reporter and a working recorder. They should also consider training courses for court reporters to ensure that proceedings run smoothly.

D. Corruption in Ghana

Corruption is a recognized and widespread problem in Ghana. Every year, Transparency International releases a report with a corruption perceptions index.\textsuperscript{203} The scores range from 0–100.\textsuperscript{204} A score of zero indicates that the country is “highly corrupt,” and a score of 100 indicates that the country is “very clean.”\textsuperscript{205} In 2016, Ghana ranked 70th out of 176 countries, with a score of forty-three.\textsuperscript{206} Since 2012, Ghana’s score has remained in the forties.\textsuperscript{207} Ghana was the second

\begin{itemize}
  \item \textsuperscript{197}Lands Commission Interview, supra note 35; Chief Interview, supra note 143 (stating that he prefers the ADR process over litigation in court).
  \item \textsuperscript{199}Yasin Abdalla Eltayeb Elhadary, Conventions, Changes, and Contradictions in Land Governance in Africa, 59 AFRICA TODAY 59, 66 (2012).
  \item \textsuperscript{200}Attorney Interview II, supra note 27.
  \item \textsuperscript{201}Id.
  \item \textsuperscript{202}Id.
  \item \textsuperscript{204}Id.
  \item \textsuperscript{205}Id.
  \item \textsuperscript{206}Id.
  \item \textsuperscript{207}Id.
\end{itemize}
worst decliner for the 2016 corruption perceptions index. Corruption levels in Ghana are better than other African countries; nevertheless, corruption is present.\(^\text{208}\)

For example, the Lands Commission faces a corruption problem.\(^\text{209}\) In Ghana, the Lands Commission “is hampered by a shortage of trained and motivated staff . . . and endemic corruption.”\(^\text{210}\) Corruption within Ghana’s land administration system stems from two main sources: (1) acceptance by the governance and (2) lack of transparency.\(^\text{211}\) Ghanaian citizens, including practicing lawyers, have accepted corruption as part of the land administration system.\(^\text{212}\)

During an interview about the land-registration system, a Ghanaian attorney spoke about corruption. The attorney stated that she often must pay Lands Commission employees a “facilitation fee” to receive the necessary land-registration documents.\(^\text{213}\) The attorney also stated that her clients, who are citizens of Ghana, understand that facilitation fees are necessary to register their land.\(^\text{214}\) Foreign clients, however, do not understand why these fees are necessary.\(^\text{215}\)

Transparency is key for an effective land administration system.\(^\text{216}\) In this context, “[t]ransparency means that the people shall be told, and shall be entitled to know, the reasons and the bases for decisions made by those in authority.”\(^\text{217}\) The lack of transparency is a root cause of corruption within Ghana’s land administration system.

Ghana’s land-registration system is complex. Many Ghanaians are illiterate and do not understand the system. The complexity, in turn, makes the system even less transparent. The lack of transparency breeds corruption because Lands Commission employees can take advantage of those who do not understand the system.

Because of the corruption in Ghana’s land administration system, people are discouraged from registering their land because the corruption increases costs.\(^\text{218}\) Indeed, “high cost, inefficient land officers and prolonged procedures related to corrupt land-registration practices, have discouraged people from registering their land and properties.”\(^\text{219}\) The cost the bribes that people may have to pay to register their land essentially “inflate[s] documentation costs,” increasing the cost of registering land beyond what it should lawfully be.\(^\text{220}\) As the cost of registration increases, fewer people can afford to complete the cumbersome land-registration process. In turn, a large amount of land in Ghana will continue to be unregistered.

Ghana’s legal system is unique due to the influence of both statutory and customary law. The policies and practices regarding land and natural resources reflect these influences. There are many officials, agencies, and organizations who are working toward finding solutions to the obstacles outlined in this Article. As Ghana continues to modernize its legal system, educate its population, and implement new programs, Ghana’s land administration system will continue to improve and the number of land disputes will decrease.
