Educating Main Street Lawyers

Luz E. Herrera

Discussion about the value of a law degree has focused on the financial success of lawyers. Both defenders and critics of the existing legal education model¹ largely ignore the implications that the cost of legal education and high lawyer fees have on access to justice.² While a lawyer's ability to make a decent living must be addressed when determining the value of a legal education, we fail to take into account the fact that there are millions of individuals in the U.S. who cannot find a lawyer to represent them when they need one. For advocates who believe that our legal system must provide alternatives other than pro bono and market-rate fee models, the current conversation about the future of legal education offers an opportunity to advance the case for an agenda that promotes affordable legal services to keep Main Street lawyers solvent and to expand access to justice for the masses.

This article argues that the value of a legal education for most law school graduates can be enhanced by their ability to earn a decent living and also help to address the unmet legal needs of individuals who cannot afford the prevailing cost of legal representation. To determine whether a legal education is worth it, prospective lawyers must be better informed about where the majority of lawyers work, whom they represent and how they make a living. This picture may be a different reality than contemporary media portrayals of "successful lawyers" which primarily portray courtroom snapshots or law as practiced in the downtown offices of corporate America. For many lawyers, this reality will mean planning for the economic challenges posed by high

Rhode, *Access to Justice* (Oxford Univ. Press 2004).

educational debt and a market demand for affordable legal services on Main Street.³

Main Street lawyers primarily offer legal services to individuals or to community business interests versus corporate interests.⁴ They constitute the largest sector of the private bar⁵ and, as a result, are the lawyers most often responsible for ensuring access to justice for the majority of low and moderate-income individuals.⁶ Main Street lawyers earn lower salaries than their counterparts in large firms and experience greater financial instability than their peers in the government and public interest sectors.⁷ Main Street lawyers are primarily the products of less prestigious law schools.⁸ The conversation about the cost and value of legal education must take into account not just the economic viability of Main Street lawyers but also the clients they serve. Law school regulators must consider how to restructure legal education to permit Main Street lawyers to establish viable law practices that promote access to justice by providing affordable legal services.

Part I offers a brief overview of legal services delivery to low- and moderate-income Americans.⁹ It challenges the dogma that there are too many lawyers by focusing on the needs of individual consumers. Part II discusses the financial woes of the legal profession as a market failure prompted by the monopoly of elite lawyers and the inflationary impact that their policies have on the rest of the profession. By acknowledging the existing framework where Main Street

3. This article acknowledges but does not engage the existing problems with pricing and financing legal education. For critiques on the legal education model see generally Brian Z. Tamanaha, *Failing Law Schools* (Univ. Chicago Press 2012); Richard A. Matasar, *The Rise and Fall of America Legal Education*, 49 N.Y. L. Sch. L. Rev. 465 (2005); Richard A. Matasar, *Does the Current Economic Model of Legal Education Work for Law Schools, Law Firms (or Anyone Else)?*, 82 Oct. N.Y. St. B. J. 20, 21 (October 2010).
4. "Main Street lawyers" describe solo and small-firm lawyers for whom low- and moderate-income clients represent a sizeable part of their law practices. For more discussion, see Luz E. Herrera, *Rethinking Private Attorney Involvement*, 43 Loy. L.A. L. Rev. 1, fn. 24 (2009).
5. Lawyer statistical reports reveal that the largest segment of lawyers work as solo practitioners. The private bar comprises 75 percent of all lawyers in the United States. Solo practitioners constitute 49 percent of these lawyers. ABA Market Research Dept., *Lawyer Demographics (2012)*, available at http://www.americanbar.org/content/dam/aba/migrated/marketresearch/PublicDocuments/lawyer_demographics_2013.authcheckdam.pdf.
6. The last national study on civil legal needs found that 75 percent of low-income individuals who had a lawyer used a private lawyer. The data demonstrated that 68 percent of low-income individuals who worked with a lawyer actually paid one to resolve their legal issue. When asked about the fee arrangement with those private lawyers, 39 percent of low-income households said they paid the usual fee, and 8 percent reported a reduced fee arrangement. The survey did not reveal whether these fee arrangements were on contingency, unbundled services, flat fees, low bono or regular hourly. Consortium on Legal Services and the Public, *Legal Needs and Civil Justice: A Survey of Americans* 1, 7-8 (Amer. Bar Assn. 1994).

8. *Id.*
9. "Americans" is used in this article to refer to individuals residing in the United States regardless of immigration status.

lawyers occupy the bottom rung, the legal profession can begin to identify more egalitarian approaches to legal education and legal service delivery. Part III encourages the American Bar Association (ABA) to depart from a “one-size fits-all” accreditation program to a model that encourages law schools to develop models that are more responsive to the needs of Main Street lawyers and non-elite client interests. The article concludes by affirming the importance of Main Street lawyers in delivering greater access to affordable legal services. Without such lawyers, the profession effectively concedes that only elite interests and the very poor are deserving of representation.

I. Access to Legal Services.

Media outlets, blogs and even dissenting legal educators effectively convey the message that our country has too many lawyers. This assertion is perplexing, since there are millions of individuals who forego legal claims or who struggle through self-representation because they cannot find and access lawyers to help them. The Legal Services Corporation (LSC) reports that for every civil legal aid attorney, there are 6,415 prospective low-income clients.¹⁰ Since 1991, less than one percent of all lawyers in the country have worked as public defenders or in legal aid offices.¹¹ Like government lawyers, public defenders and legal aid lawyers are restricted to representing clients who fit the parameters imposed by government or program regulations.¹² The number of lawyers who represent the poor is not sufficient to address the existing and growing need for free legal services. Answering the question about the value and relevancy of legal education, therefore, requires a better understanding about who has access to lawyers in this country.

A. The Unmet Legal Services Need.

There may be too many lawyers competing for a few choice jobs but there are too few attorneys helping low- and moderate-income clients with their personal legal matters. Based on its review of 16 state legal-needs studies, LSC claims that less than one-fifth of the poor who need civil legal services get these

11. See Lawyer Demographics, *supra* note 5.

12. For a detailed discussion of restrictions on federally funded programs, see Alan W. Houseman, Restrictions by Funders and the Ethical Practice of Law, 67 Fordham L. Rev. 2187, 2189-90 (1999). Sources that fund the provision of legal aid are so scarce that lawyers are finding it more difficult to find or stay in jobs that facilitate free or affordable legal services. See Legal Aid Assn. of California, Shaping the Future of Justice: Effective Recruitment and Retention of Civil Legal Aid Attorneys in California (April 2010), available at <http://legalaidresearch.org/2013/02/22/shaping-the-future-of-justice-effective-recruitment-and-retention-of-civil-legal-aid-attorneys-in-california/> (discussing the retention problem for legal aid organizations in California).

lawyers.¹³ A report from the National Legal Aid and Defender Association explains that across the country, defendants in lower criminal courts continue to be convicted and imprisoned without assistance of counsel.¹⁴ Government appointed lawyers either are overwhelmed by the number of clients or lack the resources to properly investigate their cases.¹⁵ There is free civil legal assistance available for households with incomes at 125 percent of the federal poverty threshold.¹⁶ In 2010, this translated to a family of four with income of less than \$27,641—approximately 57 million eligible individuals.¹⁷ Many individuals are eligible for free legal services but federally funded legal aid offices reported turning away 50 percent of the eligible population who sought their services.¹⁸ Similarly, public defender offices work with client eligibility guidelines to provide basic representation but the resources for free services are insufficient.¹⁹

Unfortunately, the unmet legal services need is not just an issue for the poor. Millions of individuals in our country experience legal problems annually but do not earn enough to hire lawyers. Many middle-income individuals, living from paycheck to paycheck, do not qualify for free legal services and are priced out of the lawyer marketplace. The housing market crises and the economic downturn increased the number of Americans living below the poverty line or those who, despite their stable income, now are classified as near poor.²⁰ Many

facing evictions or foreclosures are, for the first-time, confronted with an issue that requires involvement with the legal system.²¹ In California, it was estimated that in 2000 more than 7.5 million individuals were not poor enough to qualify for free legal services but earned at or below the state median income.²² This group struggles to find affordable legal advice for common matters such as housing, government benefits, consumer rights, employment law and other domestic concerns.²³ Further, some individuals who are faced with long periods of unemployment begin their own businesses. These business owners also require legal counsel when determining how to comply with government regulations, state laws and tax matters.

A 2011 study by the World Justice Project provided a sobering figure: the U.S. ranked among the lowest developed nations in providing access to justice to its citizens.²⁴ When compared with other countries, the U.S. ranked as 50th out of 66 nations in the ability of individuals to obtain legal counsel.²⁵ These domestic and global evaluations of our legal system highlight a significant problem that has been a subject of national debate for decades.²⁶ The discrepancy is in part explained by the high cost of lawyers, the underfunding of U.S. legal aid programs and also by a lack of coordination at the state and national levels.²⁷ When services are priced so high that they become cost-prohibitive, legal services consumers opt out of attorney representation on matters that would benefit from professional advice.

B. The Self-Represented

In the last four decades, courts have seen a rise in the number of individuals who represent themselves.²⁸ The reasons why individuals represent themselves range from increasing literacy and confidence in one's abilities to the belief that lawyers are too expensive or that problems can be solved without the justice system's involvement.²⁹ The right to represent oneself before a tribunal is deeply rooted in our country's founding belief that "financial status should not have a substantial impact on the outcome of litigation."³⁰ However, the last national survey released by the ABA, in 1994, found that financial status is a factor that impacts whether or not individuals seek civil legal assistance.³¹ Sixty-one percent of moderate-income households reported they did not seek assistance because the situation they were experiencing did not warrant intervention by a lawyer.³² Seventy-one percent of low-income households reported they did not access the civil justice system to address their legal problems as a result of cost or a belief that the justice system would not help.³³ Subsequent court surveys reveal that cost of legal services is not the only factor contributing to the rise of self-represented litigants but most report a high number of poor or near poor individuals accessing those services.³⁴

Courts have responded to this preference for self-representation.³⁵ The Civil Justice Infrastructure Mapping Project of the American Bar Foundation found that every state in the U.S. has information online to help self-represented litigants and 98 percent of states have a selection of legal forms on those websites.³⁶ Further, more than 70 percent of states have at least one court-based self-help center that offers information and assistance to help individuals represent themselves.³⁷ The growing resources for legal services consumers provide options that are less costly than lawyers to sophisticated legal services consumers. Yet, these self-help resources are not always sufficient for individuals who face language barriers, suffer emotional trauma or quite simply are not sophisticated enough to understand confusing procedural issues.³⁸ When they hit these obstacles, many seek affordable non-lawyer options for assistance.

C. Non-Lawyer Assistance

Prompted by legislative and executive responses to consumer needs, the bar has endorsed a limited class of paraprofessionals such as paralegals, legal document preparers and lay advocates in administrative proceedings, to provide limited assistance to litigants.³⁹ These non-lawyers assist the self-represented by translating legalese, demystifying the process and offering more affordable solutions. The legal profession has generally accepted these paraprofessionals if they facilitate the work of lawyers or handle routine matters. Still, bar associations, legislatures and courts limit non-lawyers through vague unauthorized practice of law statutes and standards that levy civil and criminal penalties on those exceeding their authority.⁴⁰ These

restrictions have supported lawyers' monopoly over the pricing of legal services.⁴¹ High hourly rates for legal fees are the norm and such price tags hinder affordable legal assistance by lawyers.⁴²

The concern for the lack of affordable legal services is prompting some states to consider offering a limited license to non-lawyers to provide limited legal advice. The Washington Supreme Court approved a court rule to that effect.⁴³ The regulations for the program are in development but these new Limited License Legal Technicians promise to provide more affordable options that help address needs of legal services consumers that cannot pay lawyers market rates.⁴⁴ They will be highly regulated by the bar and therefore will not pose a great threat to lawyer hourly rate.

The legal profession has had less luck in curtailing the efforts of non-lawyer for-profit entities that leverage technology to respond to unaddressed legal needs in the general population. A new group of non-lawyer businesses not subject to regulation by the bar have begun to erode the lawyer marketplace.⁴⁵ These technology-dependent entities ease consumers' access to legal information and legal documents at a fraction of the price that lawyers charge.⁴⁶ In a difficult economy, these new players offer consumers a welcome cost-effective alternative. Legal Zoom, the best-known of these entities providing legal document generation, reported 2 million customers and \$100 million in revenue in 2011. That same year, LegalZoom sold its minority shares for \$41 million.⁴⁷ Main Street lawyers who have traditionally performed routine legal

services at market rates are losing market share to corporate entities such as LegalZoom. In response, some attorneys and state bar associations allege that these new providers are engaging in unauthorized law practice.⁴⁸ To date, the claims that these new corporate operations are overstepping their authority have proven ineffective against the widespread practice of legal document preparation.⁴⁹

Like the paraprofessionals who preceded them, these new providers offer the American public information and resources more affordable and accessible than lawyers. These various consumer-responsive efforts help bridge access to justice but they often fail to provide solutions for complex legal issues. Completing form documents facilitates the legal process but there are cases and clients that require the specialized training of attorneys.

II. The Legal Market Failure.

Recent law graduates who struggle in a changing legal marketplace with high educational debt question the value of their law degree. Alumni of a handful of law schools have even sued their alma mater alleging fraudulent representation of employment statistics.⁵⁰ The outcry by unemployed and underemployed lawyers has caused some commentators and scholars to denounce non-elite law schools as the problem with legal education.⁵¹ Critics classify law schools with low employment placement rates and high student debt as failing law schools.⁵² While most legal education programs could use restructuring, to blame a market failure on a specific subset of law schools diverts attention from the macro-economic problems facing legal education. The unmet legal needs of millions of individuals and the underemployment of lawyers signal problems that stem from a market failure that is primarily based on the monopoly that elite lawyers have on the legal profession.

A. Elite Lawyers' Monopoly.

The legal profession has the exclusive right to regulate how legal services are delivered.⁵³ This monopoly is maintained by instituting barriers for entry into the profession through mechanisms such as law school accreditation standards and bar exams, in addition to unauthorized practice of law statutes.⁵⁴ These controls, which guarantee a minimal level of competency and consumer protection, also limit access to who provides and receives legal services.⁵⁵

Regardless of the barriers to entry, the number of lawyers grew approximately 424 percent in the 50 years between 1961 and 2011.⁵⁶ The growth of the legal profession has been attributed to a reduction of barriers for law school. In the last 30 years, the population of women lawyers grew from 8 percent in 1980 to 30 percent in 2005.⁵⁷ The Law School Admissions Council (LSAC) reported that the number of women enrolled in law school in the 2011-2012 academic year constituted 46.7 percent of all law students.⁵⁸ The same source states 24.5 percent of J.D. students identified as minority students in that academic year.⁵⁹ These changes in the law student population promise to diversify the legal profession, which the 2010 U.S. Census found was still 88 percent non-Hispanic white.⁶⁰

Lawyers constitute less than half of one percent of the U.S. population.⁶¹ Considering the increasingly complex and litigious society in which we live, the number of lawyers does not seem excessive. The problem is that recent employment projections reveal there are approximately 25,000 job openings

53. The monopoly over legal services is embedded in the judicial branch as part of our democratic system of checks and balances. See Art. I, §8, cl. 18 of the U.S. Constitution. Laurel A. Rigertas, *Lobbying and Litigating Against "Legal Bootleggers"—The Role of the Organized Bar in the Expansion of the Courts' Inherent Powers in the Early Twentieth Century*, 46 Cal. W. L. Rev. 65 (2009).

for lawyers but law schools graduate up to 45,000 prospective lawyers each year.⁶² Being transparent when articulating the value of legal education requires that we clearly define the problem that results from a limited number of jobs that compensate lawyers with the type of salaries they need to live comfortably and pay off their educational debt. Having more lawyers than legal jobs is not a new phenomenon. A large percentage of lawyers have always created their own jobs, principally as solo practitioners.⁶³

Failure to disclose the full spectrum of outcomes creates an unequal bargaining position. Monopolies are maintained by asymmetric information. Providing prospective law students with information about where lawyers work and how they make a living can better prepare future lawyers to tailor their expectations and plan for the future. Only one percent of all lawyers are employed as public defenders or legal aid lawyers, 4 percent are employed in education and the judiciary and another 8 percent work as government lawyers.⁶⁴ Approximately 8 percent of lawyers are employed in business while another 4 percent are inactive or retired.⁶⁵ The remaining 75 percent of all attorneys work in private practice.⁶⁶ Of those private practitioners, 20 percent work in law firms of more than 50 lawyers, 18 percent work in firms of six to 50, and 14 percent work in small law offices of two to five lawyers.⁶⁷ The largest group of lawyers is made up of solo practitioners.⁶⁸ They accounted for 49 percent of the private bar in 2005 and that figure was similar in 1980.⁶⁹ Understanding the legal profession requires that we come to terms with the fact that many lawyers create their own employment opportunities. Although the number of self-employed lawyers might be higher in coming years, given layoffs and the unemployment of new law school graduates, attorney self-employment is not a new phenomenon.

The notion that lawyers will find jobs that pay six figure salaries has been primarily a reality for graduates of elite law schools and those with strong professional networks or extraordinary credentials.⁷⁰ Until employment prospects began to wane for elite law school graduates, most ABA leaders and law professors were largely unaffected by the prospect of self-employment.

70. William D. Henderson & Rachel M. Zahorsky, The Pedigree Problem: Are Law School Ties Choking the Profession?, A.B.A. J. 36 (July 2012).

Many traditional law school faculties and national bar leaders are graduates of elite or highly ranked law schools.⁷¹ Although they comprise a small sector of the bar, they command a significant leadership role in the legal profession. As a result, they have been and continue to be chiefly responsible for the establishment of the current paradigm of legal education.

Valuations of law schools based on post-graduate employment opportunities tend to favor elite and regional law schools with greater prestige.⁷² Some graduates of low-ranked law schools secure employment in business, government and the public interest sector but the majority of lawyers eventually work to generate their own income in solo and small law firms.⁷³ Even lawyers who work in larger firms ultimately are required to bring in their own clients to advance to partner or equity owner of the law firm. New consumer watch groups have emerged to ensure that law schools provide accurate information about employment prospects.⁷⁴ Still, the knowledge that upon graduation, one may be self-employed or need to generate one's own income can be daunting to individuals contemplating taking on high educational debt.

In 2011, the ABA reported that the annual cost of the average law school tuition and fees was \$39,496 for private schools and \$19,788 for resident students at public law schools.⁷⁵ These figures represent an increase in tuition of 173 percent for private schools and 256 percent for public schools since 2001.⁷⁶ Educational debt increased by at least twice the rate of inflation in the last two decades.⁷⁷ The average debt for law students graduating in 2011 was \$75,728 for public schools and \$124,950 for private schools.⁷⁸ In states like California,

where almost 20 percent of all U.S. lawyers are licensed,⁷⁹ the annual price tag to attend the least expensive public law school is about \$47,000.⁸⁰ In addition, these law schools estimate living expenses add at least another \$23,000 each year.⁸¹ A public law school education with a price tag of over \$200,000 is a reality for many new lawyers. While different income-based and public loan repayment programs help new lawyers and law students manage the cost of their education,⁸² critics insist these programs only mask the problem.⁸³ They cite large tax penalties, low credit ratings and inconsistent eligibility for these programs as difficulties that these programs have not yet addressed.⁸⁴

To ignore that education debt burdens the provision of affordable legal services is to show disregard for the average legal services consumer. The price tag of a law degree offers lawyers justification to charge high rates for their services. The lack of oversight over how much attorneys charge clients provides few incentives for lawyers to reduce the cost of legal services. The current legal education structure endorses a market where most lawyers charge fees above what an average consumer can pay.⁸⁵ As a result, many consumers are forced to either pay high hourly rates or opt out of hiring a lawyer. The information imbalance created by a lawyer monopoly over legal services permits the most elite law schools and lawyers to set the standard and charge more than is necessary.⁸⁶ The most prestigious law schools have justified their tuition

increases by placing their graduates in jobs with lucrative salaries. Most law schools have a difficult time delivering the same result but feel compelled to price their product similarly in order to stay competitive.⁸⁷ Information deficits are reflected not just in the high cost of legal education and the pricing of legal services but in the resulting stratification of lawyers.

B. Lawyer Stratification

Bar admissions requirements correlate with socio-economic factors that in turn produce a stratified legal profession.⁸⁸ Requirements such as standardized tests and attendance at expensive ABA-accredited law schools exclude many individuals from highly disadvantaged backgrounds.⁸⁹ These requirements, shown to correlate with social and economic status of law school applicants, determine where a prospective law student is admitted.⁹⁰ In turn, the law school from which lawyers graduate largely defines their work setting.⁹¹

Who lawyers represent determines their status in the profession. The first empirical study of a cross-section of all Chicago lawyers in 1975 found the profession was divided into two distinct hemispheres: lawyers who represented corporate interests and lawyers who represented the interests of individuals and small businesses.⁹² The prestige, income, networks, and relationships of lawyers correlated to an attorney's client-base.⁹³ Attorneys who served corporate clients enjoyed greater prestige and income than attorneys who provided legal services to individuals and small businesses.⁹⁴ The Chicago lawyers study found that demographic characteristics reflected the type of law

schools lawyers attended.⁹⁵ Lawyers who attended elite law schools were less likely to practice in solo or small firms.⁹⁶

Twenty years later, the 1995 Urban lawyers study described an even more specialized and fragmented bar.⁹⁷ Large law firms with large corporate clients in Chicago continued to attract a disproportionate number of graduates from prestigious law schools.⁹⁸ Yet, these firms employed only 5 percent of local law school graduates.⁹⁹ Solo and small firms primarily represented individuals with personal legal services¹⁰⁰ but found increased competition for a fixed amount of work.¹⁰¹ Lawyers in solo and small firm practice earned less than their counterparts had in 1975.¹⁰²

The After the J.D. Project (AJD) found that local law school graduates continue to dominate the small firm and solo practitioner sectors.¹⁰³ This national longitudinal study confirmed that law schools that produce lawyers who work in the personal services sphere are deemed less prestigious than those whose graduates work with corporate clients.¹⁰⁴ While graduates of independent law schools¹⁰⁵ were found to spend approximately two-thirds of

104. Jonakait, *supra* note 71, at 864.

105. Independent law schools refer to schools that are not part of a university. These law schools in addition to non-elite urban law schools were formed to increase access to the profession by establishing less restrictive admission requirements. Sterling, *supra* note 88, at 390–95. See also Dorothy E. Finnegan, *Raising and Leveling the Bar: Standards, Access and the YMCA Evening Law Schools, 1890–1940*, 55 *J. Legal Educ.* 208 (2005) (describing the development and contributions of part-time law schools).

their time serving individuals,¹⁰⁶ graduates of elite law schools predominate in large corporate law practice.¹⁰⁷ Lawyers representing Main Street, and not corporate interests, graduate from lower ranked law schools and make less than their elite law school counterparts despite working as hard.¹⁰⁸

Perhaps surprisingly to some, interviews with AJD survey participants found that solo and small firm lawyers are satisfied with their decision to become a lawyer.¹⁰⁹ In fact, graduates of fourth-tier law schools expressed greater career satisfaction than graduates of elite law schools.¹¹⁰ Conclusions from this latest empirical data explain that perhaps graduates of lower tiered schools justify their lower wages and less career mobility by “accepting their place in the profession’s hierarchy.”¹¹¹ Graduates of lower ranked schools tend to acknowledge their law degrees as a boost to their professional development,¹¹² value service to clients and are least likely to cite prestige and mobility as important considerations in their job choice.¹¹³ These findings reveal that the value of a legal education will differ for individuals based on their socioeconomic background and their ability to make a living.¹¹⁴ A law degree that does not produce full-time employment or place a lawyer in the top percentile of earners in this country may not be valuable to some, particularly to graduates of elite law schools. The same degree, but perhaps from a less prestigious law school, may be deemed valuable because it promises to open opportunities to advocate, to be part of an esteemed profession or to command a higher salary than would otherwise be available.¹¹⁵ To determine whether law school is worth it, a prospective student must be honest about his or her motivations to become a lawyer. A law degree opens doors to courtrooms, boardrooms and other places of power that are not accessible to lay advocates but it does not guarantee wealth.

106. Sterling, *supra* note 88, at 406–407. Also, graduates of independent law schools are more likely to work in business and be older, probably reflecting law school as a choice for career advancement in an established field. *Id.*

115. Rebecca Sandefur, Staying Power: The Persistence of Social Inequality in Shaping Lawyer Stratification and Lawyers’ Persistence in the Profession, 36 *Sw. U. L. Rev.* 539, 545 (2007).

The Bureau of Economic Analysis revealed that the legal services industry grossed the highest revenues on record in 2012.¹¹⁶ The U.S. Department of Labor reported the annual median salary for lawyers in May 2012 was \$113,530.¹¹⁷ Lawyers' median salaries are two and a half times that of the average worker in the U.S.¹¹⁸ However, the pie is not equally divided among all lawyers. Half of all lawyers make less than the median. The median for experienced legal services attorneys is \$65,000 and \$78,600 for public defenders with 11 to 15 years of experience.¹¹⁹ New lawyers, particularly those who do not graduate from elite law schools, account for the lower than average median. A 2013 industry survey projecting starting salaries reports that experience and practice setting help determine salary.¹²⁰ The more experience and the larger the law firm, the larger the salary. Also, lawyers with "strong business development skills and extensive client contacts" are paid a premium.¹²¹ The survey also states that the job market for new graduates is highly competitive as "firms focus their hiring on experienced lawyers rather than new graduates."¹²²

The National Association of Law Placement (NALP) reported the national median salary for the class of 2012 as \$61,245 with an unemployment rate of 12.8 percent.¹²³ NALP affirms that the job market has been generally difficult for many law graduates but that the current market downturn has disproportionately effected employment at large law firms.¹²⁴ Since graduates of the highest ranked law schools are given priority for employment above all other law school graduates, the opportunities for employment as lawyers have

declined.¹²⁵ As a result, 6.7 percent of 2012 graduates were employed in jobs where neither a law degree was required nor served as an advantage.¹²⁶ NALP explains that employment patterns in the legal profession are influenced by the national recession in which the legal sector lost approximately 60,000 jobs as a result of technological advances that reduce the cost of labor and the outsourcing of work to countries with a less expensive labor force.¹²⁷ These same forces have affected the income streams of Main Street lawyers.

We know little about the overall salaries of Main Street lawyers other than they tend to be lower than that of corporate lawyers.¹²⁸ A recent study of 29 Minnesota Main Street lawyers found that their median net income was \$75,320.¹²⁹ The lowest earners were lawyers with less experience and the attorneys with six figure salaries were specialists.¹³⁰ To earn their income, these attorneys reported working a median of 48.7 hours per week.¹³¹ Some worked year round and did not take a vacation while others took up to six weeks per year.¹³² The financial success of Main Street lawyers is largely dependent on their client's ability to pay, the area of law they practice and their ability to maximize their market niche. There are Main Street lawyers who have developed lucrative careers representing plaintiffs against corporate interests and those who struggle to make a living by charging clients moderate hourly rates. Many Main Street lawyers often begin their careers working part-time for solo and small law firms. Lawyers who reluctantly become Main Street lawyers learn the business of law haphazardly. Most do not think of themselves as entrepreneurs or as small business owners and many report learning the business of law on their own. Some learn how to run their law firms by working for others as independent contractors at rates of \$30 to \$50 per hour.

Legal fees exceeding \$300 an hour are commonplace on Main Streets in large metropolitan areas. Lawyers who represent large corporate entities and economically privileged individuals charge even higher rates. The idea that an attorney should lower their fee to be more accessible to the client population is something that the legal profession has not embraced. Experienced lawyers

132. *Id.*

often advise novice lawyers against charging lower rates and building a reputation as the “cheap lawyer.” The implication is that a less expensive lawyer delivers a substandard service.¹³³ While it is true that a more thorough job will require more time and often increase a legal bill, affordable does not have to be substandard. Charging a rate lower than market to a client-base who earn an hourly median income of \$16.71 is simply better economics for Main Street lawyers.¹³⁴ New Main Street lawyers who struggle to secure a client who can pay them \$300 per hour may end up with more clients by charging \$150. If a Main Street lawyer develops a model in which she collects 20 hours at \$150 each week, her gross income will average about \$12,000 per month or up to \$150,000 per year.¹³⁵ The financial viability of Main Street lawyers is largely dependent on their clients’ ability to pay, the area of law they practice and their business skills.

A Main Street lawyer’s low-bono fee structure must consider the overhead of running a business, living expenses and paying down educational debt. Main Street lawyers can significantly reduce their business overhead by integrating technology into their practices. As they are building or re-tooling their practices, new Main Street lawyers can reduce their cost of living by opting out of luxury housing and transportation options. Despite the discipline, educational debt that exceeds \$120,000, and perhaps even \$200,000, can become a major obstacle when determining how much to charge clients for legal services.¹³⁶

The journey to financial success for Main Street lawyers is not always easy or speedy. However, those who have the courage, creativity and diligence to identify a market need and incorporate technology in their practices can still do well and also do good.

133. See George A. Akerlof, *The Market for “Lemons”: Quality Uncertainty and the Market Mechanism*, Q. J. Econ. (1970) (describing the problem of used cars, which consumers assumed to be lower quality, and which ultimately excludes a market for good used cars from developing).

III. Legal Education for Main Street Lawyers

As the ABA considers how law schools in the 21st century should deliver a quality legal education, it must keep in mind how the cost of a legal education affects a lawyer's ability to offer affordable legal services. The conversation about the cost and value of legal education must take into account not just the viability of Main Street lawyers, but also the clients they serve. To overlook this correlation is to disregard the ABA's model mandate for lawyers to "be mindful of deficiencies in the administration of justice and of the fact that the poor, and sometimes persons who are not poor, cannot afford adequate legal assistance."¹³⁷

Law school regulators must consider how to restructure legal education to support future Main Street lawyers who need to establish economically viable law practices for middle-income Americans. Law schools play a critical role in lawyers' professional development and the decision-makers at these institutions must recognize that the cost of their product ultimately affects incentives and opportunities for practitioners to offer affordable legal services. Since tuition dollars are misplaced when put toward prestige-driven rankings, legal education leaders must decide whether they want to keep ignoring the profession's existing stratification or whether it is time to embrace a more flexible legal education model that reflects the profession's diversity. For too long, law schools have lost their focus as institutions chiefly responsible for forming lawyers, not just to be judges, law professors or to counsel the wealthy but to educate Main Street lawyers on how to address the legal needs of the average American.

Employment data, amount spent per student and other criteria never will help lower-ranked law schools compete because their reality is and should be different than those of the elite institutions. Non-elite law schools must keep in mind that they emerged as "access schools" for those traditionally unwelcomed into the profession. The false notion that finding employment nine months after graduation determines the value of these schools demonstrates a grave misunderstanding of the importance of professional development of self-employed lawyers. Law school advocates say that although a law degree may not produce a six-figure salary within nine months of graduation, it continues to offer greater opportunities than many other professional credentials.¹³⁸ That view may be correct, but lower ranked law schools may find it more difficult to justify high tuition if they cannot facilitate a model that helps their graduates pay for their legal education. Since these law schools are already at the bottom of the prestige totem pole, they have the best incentive to develop a new model of legal education that better responds to Main Street lawyers and their clients.

Times*, Nov. 28, 2012, at A31.

Declining law school enrollments¹³⁹ create an opportunity for law schools to evaluate their practices and cost structures to develop a more consumer-responsive legal education program.¹⁴⁰ For law school graduates who are able to land employment that allows them to cover the cost of their legal education, law school continues to be a good investment. The value of a law degree is more tentative for those who lack wealth and strong professional networks. Still, there are individuals willing to pay a premium to become lawyers—not only for greater opportunity and access to a profession of a privileged few in our society, but also because attorneys are advocates who hold great sway over the rules and workings of our democracy. Non-elite law schools play a critical role in the profession by producing lawyers who serve and represent an important constituency in our society. These law schools produce diverse practitioners who can reach people who need and deserve counsel from their community, who speak their languages, understand their culture and can help them address their legal problems.

A continued focus on replicating the existing legal education model gives the impression that lawyers are only worth producing if they represent elite interests. Law schools that produce a large number of Main Street lawyers must recalibrate their students' and staffs' expectations so they understand that their curriculum and tuition must reflect the types of lawyers they produce. Law schools must continue to graduate individuals who think like lawyers but they may have to redistribute resources to support initiatives that prepare students to provide accessible legal services. A switch to this new paradigm requires every sector of the institution—admissions, financial aid, career services and faculty—to advise students about the opportunities and challenges of law practice.¹⁴¹ Law schools must change or be changed.¹⁴²

However, law schools cannot innovate and create consumer-responsive programs without support from its accrediting body. If the profession wants to retain control of its power to educate and regulate itself, it must be sufficiently critical of imperfect practices that primarily benefit a small group of elite lawyers. It is imperative that the ABA scrutinize the logic and relevancy of many of its archaic guidelines for accrediting law schools so that sorely

139. Law school applications decreased by 38 percent in the last three years. Ethan Bronner, *Law Schools' Applications Fall as Costs Rise and Jobs are Cut*, N.Y. Times, Jan. 30, 2013, available at http://www.nytimes.com/2013/01/31/education/law-schools-applications-fall-as-costs-rise-and-jobs-are-cut.html?_r=1&.

needed economic resources can be used to create innovative legal education programs that produce viable Main Street lawyers who offer affordable legal services. This article does not purport to offer a holistic solution to improve legal education but it encourages a revision of accreditation standards to allow non-elite law schools to devise legal education programs that are responsive to the needs of their student population and the communities of legal services consumers they will serve. In order to do this, bar leaders must acknowledge the roles and challenges of all lawyers, including those who provide personal legal services on Main Street. Messages sent by bar leaders about what the profession values are critical to defining the expectations of prospective lawyers. This information may not be well received by those who have idealized views of what it means to be a lawyer, but it may encourage the development of a thoughtful legal education agenda that advances the interests of Main Street lawyers and their clients.

IV. Conclusion

As the legal profession considers how it will recreate itself in the face of shrinking employment opportunities, a declining law school applicant pool and the rise of corporate entities that serve as lawyer substitutes, we must keep in mind the needs of non-elite clients and the lawyers that address their unmet legal needs. Law degrees today must include instruction on the development of sustainability models that work for both lawyers and the consumers they serve. The profession has an obligation to educate, train and encourage lawyers to meet the needs of all legal services consumers. Law schools that produce Main Street lawyers have an important role to play in addressing the large gaps in the provision of justice in the United States.
